- End-to-End implementation services from initial evaluation to go-live
- Technical expertise to migrate existing BAAN users to INFOR LN
- Project management leadership and tools to accurately plan, track and mitigate risks

WHAT IS ERP?

ERP or Enterprise Resource Planning is IT software that integrates business activities across an enterprise—from product planning, parts purchasing, inventory control, and product distribution, to order tracking. ERP may also include application modules for the finance, accounting and human resources aspects of a business. INFOR-BANN is one of the leading vendors of ERP for steel industry.

Getting the most from our industry focus

With a delivery team of over 50 consultants, we leverage some of the most experienced professionals on INFOR LN

Enterprise resource planning (ERP) has become more important than ever to midsize manufacturers as they face mounting pressure to become more agile, adaptable and transparent in their operations to gain a competitive edge. Some of the factors causing the buildup are:

- *Ever-shifting customer demands — all with the expectation of faster turnaround times and extraordinary customer service*
- *Complex logistics, quality control and product costing caused by an increase in global sourcing and subcontracting*
- *A strong focus on keeping customers over the long term*
- *Growing compliance requirements and government regulation*

Also, many of these companies are now suppliers to larger original equipment manufacturers (OEMs) and are continually being squeezed by them to reduce costs and streamline operations.

Over the past few years, ERP vendors, noticing these trends, have concentrated their efforts in making their solutions more “friendly” to small and midsize businesses through prepackaging, adding industry-specific functionality and best-practice templates, and lowering the total cost of ownership. Today, these solutions are more robust, facilitate global business processes and deliver a fully integrated system that can help speed production; operate profitably with less oversight; control costs; reduce inventory; enable collaboration; better manage suppliers, employees and customers; and gain strategic insight. But achieving these significant benefits requires a staff with the skills, knowledge and capability to assure a successful implementation — the kind of resources many midsize companies do not have, even those that already have legacy ERP systems installed.

Domain Expertise

- CRM (Customer relationship management)
- ERP (Enterprise Resource planning)
- HCM (Human Capital management)
- BPM (Workflow Enablement)
- BI (COGNOS)
- SCM (Supply chain management)

- Migration services
- Staff Augmentation
- Training services
- Support and Maintenance
- GAP Analysis

Facing change Finding Opportunity

COMM-IT implementation team is the only team with INFOR which has both ERP and MES implementation experience.

Implementation Services for Infor

ERP LN are designed for midsize manufacturing companies that want to realize the full potential and value of the Infor ERP LN application suite, whether they need to upgrade from their Baan system or migrate from another enterprise application solution.

These services are delivered through a team of COMM-IT industry and technology consultants with years of collective experience and expertise in manufacturing best practices, business process management, and Infor and Baan systems. This diverse pool of professionals has the :

- *Industry and business process skills to properly weave Infor ERP LN's capabilities and business flows into your business fabric*
- *Technical skills to ensure that Infor ERP LN is properly configured, installed and working with your chosen hardware, middleware and database platforms*
- *Migration skills to execute a smooth transition from your legacy Baan system to Infor ERP LN, including data conversion*
- *Integration skills to tie together multiple ERP sys-*

tems and "bolt ons" as well as supply chain management and customer relationship management applications

- *Project management and testing skills to help ensure a successful go-live*
- *Cutting-edge methodologies and tools that have been honed over the years by our consultants worldwide and have made COMM-IT a trusted partner in ERP implementation*

Implementation Services for Infor ERP LN begin with one to two weeks of fact gathering and needs assessment, focusing on your business drivers and current environment. We'll examine your infrastructure, application architecture, business processes and database design, and present you with an end-to-end services proposal that can help you make the right decisions for your company's future. After you make those decisions, we'll work with you to achieve real results, on time and within budget.
